Remarks

¹ Information security breaches is defined as unauthorized access to computer data, applications, networks, devices, and data security systems.

² Other cybersecurity incidents is defined as a cybersecurity breach other than unauthorized data access or disclosure, e.g. a perpetrator taking control of an information system that controls the organization's power generation or transport system.

³ Data breach is defined as a consequences of a cybersecurity breach leading to an unwanted situation or unlawful action, data leakage, unauthorized change or disclosure of personal information as well as sorting and processing of personal or confidential information which affects cybersecurity.

⁴ Substantiated complaints is defined as a complaint letter drafted by a customer or a government regulatory body related to a breach of customer personal data, or a third-party complaint, which is consistent with the Company's personal data criteria or policy.

⁵ Secondary purposes are defined as the use of customer data different from the purpose previously notified to the data subject.

Definitions and Calculation Guidelines**Energy**

- Total energy consumption includes fossil fuels, electricity and renewable energy.
- Energy fuel consumption is calculated as the total amount of fuel consumed for each type multiplied by the calorific value for each type.
- The amount of electrical energy consumption (gigajoules) is equal to the sum of the amount of electrical energy consumed (megawatt hours) multiplied by 3.6.
- The conversion factor is based on Thailand Energy Efficiency Situation Report (Department of Alternative Energy Development) and Efficiency and The Engineering ToolBox from https://www.engineeringtoolbox.com/fuels-higher-calorific-values-d_169.html

Intensity

- The energy intensity value is calculated by the company's total revenue.

Base year

The base year for comparing environmental data efficiency is 2023, which has been thoroughly collected and validated by an external verifier.

The Number of Incidents of Non-Compliance with Water Quality/Quantity Permits, Standards and Regulations								
-	All Areas	- Incidents of Non-Compliance with Water Quality/Quantity Permits, Standards and Regulations	Cases	0	0	0	0	Thailand, Vietnam, and Italy

Remarks:

- ND refers to no data
- The operation does not have water storage.

Definitions and Calculation Guidelines

- Water withdrawal is defined as the amount of water collected from various water sources for the activities of the organization, calculated as the water rate (baht) / water price (baht per unit).
- Water consumption is defined as the water used in all processes or operations, including water for consumption and recirculating water that is recovered but not recirculated back to the original water source, including evaporation, dehydration, and more, calculated from 20% of the water drawn up for use.
- Water discharge is defined as the water that has been treated and discharged into public water sources.
- A water stress area is where water consumption is unsustainable to supply long-term sustainable water demand, which is located in a high-level water stress area.
- Water Intensity is calculated from water consumption with reference to the total revenue of the company.

Base year

The base year used in the calculation for comparison of environmental data performance is 2023 when the data has been collected completely comprehensive and validated by external verifiers.

Definitions and Calculation Guidelines

Greenhouse gas emission

Greenhouse gas emissions reporting covers CO₂, CH₄, N₂O, HFCs, PFCs, SF₆ and NF₃ and is shown in terms of the CO₂ equivalent to Global Warming Potential (GWP).

1. Reporting Scope

Identifying the organization's scope for collecting sources of greenhouse gas emissions covering affiliates, subsidiaries, joint ventures, and other companies under operational control of Central Retail with the following details:

- 1.1 Direct GHG emissions (Scope 1) are processes and activities that generate greenhouse gas emissions directly from the organization's operations, such as fuel combustion of the organization's machinery and vehicles, leakage (fugitive emissions) in air conditioning and refrigeration systems, CO₂ and FM200 fire extinguisher chemicals, as well as septic tank methane emissions.
- 1.2 Indirect GHG emissions Energy consumption (Scope 2) is the use of energy obtained from outside sources for the Company's operations, such as electricity from other projects (Without Bundle).
- 1.3 Other Indirect GHG emissions (Scope 3) are indirect emissions that occur as a result of a company's activities, but are from sources not owned or controlled by the company. The scope 3 of the Company include purchased goods and services, waste generated in operations, business travel, employee commuting, downstream distribution and transportation.

2. Quantity Reporting

2.1 Calculation of Scope 1 GHG emissions from the combustion process based on fuel consumption (by weight or volume) and greenhouse gas emission values referred to Intergovernment Panel on Climate Change 2006 (IPCC)

2.2 Calculation of greenhouse gas emissions produced indirectly Scope 2 will be reported from a total of external acquired electrical energy with the reference of the emission value from the producer or seller using the following methods:

- The location-based approach calculates the quantity of indirect GHG emissions from energy based on the average value of GHG emissions to categorize electrical generation based on its geographical location at the local, regional, and national levels.
- The market-based approach is a method for calculating indirect GHG emissions from energy for organizations that wish to report greenhouse gas emissions on their output through a Power Purchase Agreement (PPA) or through their own contract.

This includes the acquisition of a Renewable Energy Certificate (REC) credit certificate.

2.3 Other indirect greenhouse gas emissions (Scope 3) can be calculated in line with the Greenhouse Gas Protocol standard and classified into 6 categories for the Company's operations in 2023:

- Category 1: Purchased goods and services, including water consumption, which is calculated based on the amount of water used (m3) and the emission factor referred to by TGO.
- Category 3: Fuel- and Energy-Related Activities, including emissions related to the production of fuels and energy purchased and consumed and the emission factor referred to by TGO.
- Category 4: Upstream Distribution and Transportation, calculated based on the total distance of the Supplier's product delivery to Own operation (km) operated by Supplier and the emission factor referred to by TGO.
- Category 5: Waste generated in operations, including general waste, recycled waste, and hazardous waste, which is calculated based on the amount of waste (kg) and the emission factor referred to by TGO.
- Category 6: Business travel, including travel by plane, which is calculated based on the distance (km) and the emission factor referred to by Defra.
- Category 7: Employee commuting, calculated based on the total employee commuting distance (km) and the emission factor referred to by TGO.
- Category 9: Downstream Distribution and Transportation, calculated based on the total distance of the company's product delivery to customers (km) operated by outsourcing and the emission factor referred to by TGO.
- Category 11: Downstream leased assets, calculated based on the total electricity consumption (kWh), water consumption (m3), and cooking gas consumption (kg) of the company's tenants and the emission factor referred to by TGO.

3. Assessment method

- Corresponding to The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard Revised Edition and the Carbon Footprint Assessment Guidelines of the Thailand Greenhouse Gas Management Organization (TGO).
- The conversion factor is based on the annual energy report of Thailand Department of Alternative Energy Development and Efficiency and The Engineering Tool Box (https://www.engineeringtoolbox.com/fuels-higher-calorific-values-d_169.html)
- Emission Factor based on Intergovernmental Panel on Climate Change (IPCC) and Thailand Greenhouse Gas Management Organization (TGO).
- Global Warming Potential (GWP) according to Intergovernmental Panel on Climate Change (IPCC: Intergovernment Panel on Climate Change 2006).

Intensity

- Greenhouse Gas Emission Intensity is calculated by using the company's entire revenue.
- Intensity values include scope 1 and 2.

Base year

- The base year used in the calculation for comparison of environmental data performance is 2023 when the data has been collected completely comprehensive and validated by external verifiers.

Remarks:

- ND refers to no data
- Boundary of waste related data does not include wastes arising from maintenance activities done by outsourced service providers.

Definitions and Calculation Guidelines

- Waste refers to garbage and waste occurred from company's operations and activities. The total amount of waste generated in this report is calculated by weight and estimation.
- Waste diverted from disposal: offsite refers to garbage and waste that are recycled through the recycling process or reused by external organizations
- Waste directed to disposal offsite refers to garbage and waste that is taken through the process of disposal such as landfill, incineration by external organizations

Base year

- The base year used in the calculation for comparison of environmental data performance is 2023 when the data has been collected completely comprehensive and validated by external verifiers.

Remark

- The scope of Responsible Sourcing include CFR and CFM only

Definitions

- Sales of Organic and Health Products refer to the sale of organic foods and health-focused items made with natural ingredients, free from harmful chemicals, and designed to support consumer health and environmental sustainability.
- Sales of OTOP Products refer to the sale of community-based products that reflect local craftsmanship, culture, and resources, developed under the "One Tambon One Product" (OTOP) initiative.
- Incidents concerning health and safety impacts of products and services refer to cases where non-compliance with applicable laws, regulations, or internal standards related to health and safety has been identified.
- Non-Compliance with Regulations resulting in a Fine or Penalty refers to cases where the company has been found at fault for violating regulations, leading to fines or penalties being imposed. Incidents where suppliers are at fault and receive penalties should not be included in the company's performance data.
- Non-Compliance with Regulations resulting in a Warning refers to cases where the company has been found at fault for violating regulations, leading to an official warning issued by a regulatory body. Incidents where suppliers are at fault and receive warnings should not be included in the company's performance data.
- Non-Compliance with Voluntary Codes refers to complaints or incidents related to the health and safety impacts of products and/or services where the company has failed to adhere to voluntary codes or standards. These incidents specifically involve non-compliance with health and safety regulations or internal protocols that may impact customer well-being.
- Recall refers to actions taken by a company to remove a product from the market. Recalls may be initiated voluntarily by the company or mandated by relevant government agencies.
- The number of product lines for which products were recalled refers to the total count of product categories (sub-departments) involved in a recall.

	Recordable Work-Related Ill-Health						
	- Employees	Cases	0	18	0	0	Thailand, Vietnam and Italy
	- Contractors	Cases	0	0	0	0	Thailand, Vietnam and Italy

Definitions and calculation guidelines

Hours Worked is the total number of working hours including regular working hours and overtime

Work-Related Injuries as a result of injuries that occur from work or activity of the Company

Recordable work-related injuries Medical Injuries; MTIs

High-Consequence Work-Related Injuries Work-related injuries that result in time away from work where a full recovery cannot be made within 180 days.

Remark
For the year 2022-2023, contractor data reporting does not include transportation workers and salesperson of the fashion and hardline groups, and contractors of the property group because the data has not yet been collected.

Method for Calculating Work-Hours
Number of employee work-hours
= Working hours (hour) = Number of worker x scheduled workday x number of working hour per day

Calculation Guidelines
Rate of fatalities as a result of work-related injuries
= number of fatalities as a result of work - related injuries [200,000 or 1,000,000] / number of hour worked

Rate of high-consequence work-related injuries
= number of hight - consequence work - related injuries x [200,000 or 1,000,000] / number of hour worked

Rate of recordable work-related injuries
= number of recordable work - related injuries x [200,000 or 1,000,000] / number of hour worked

Lost Time Injury Frequency Rate (LTIFR)
= number of lost - time injuries frequency x [200,000 or 1,000,000] / number of hour worked

Fatalities from Work-Related Ill-Health
=number of lost - time occupational illness frequency x [200,000 or 1,000,000] / nmber of hour worked
