

Waste Segregation

The Company promotes waste management from waste generation to disposal. This is because some types of waste can be reduced, reused and recycled, which can be beneficial and falls in line with the circular economy framework. Segregating waste is marked with 4 colored trash cans: organic waste, recycled waste, general waste and hazardous waste. The Company have installed these colored trash cans in affiliated shopping centers and office buildings to create awareness and promote waste segregation practices for customers and employees in the organization.

Practices in Waste Segregation

Practices in waste segregation adheres to the operating principles according to the type and size of the area, according to the Company's waste segregation policy.

The waste segregation policy is applied to all subsidiaries in the Central Retail, which encourages employees to refrain from using personal trash and to help instill waste segregation behavior, by focusing on making the most out of waste and reusing waste. The Company records the amount and weight of each type of waste and allocates compensation to employees who participate in the segregation of waste or bring unused items to donate to the Foundation for the Environment. Furthermore, the sorted waste is then sent to the partners to be managed correctly according to academic principles to support circular economy management.
